

Digital Product Comparison

eBook is a digital county plat book that is ideal for sharing in an office and printing individual pages.

Perfect for the plat map user who wants to see who owns the land they are currently located on.

Enhanced performance for anyone who wants to use our plat maps in Google Earth®.

Cropped township images for anyone who needs to insert maps into a report or marketing material.

This geo-referenced tif can be imported into your GIS software as an economical parcel data alternative.

Have complete control of the county plat map layers when you import the file into your GIS.

The most up-to-date parcel polygon data that contains Parcel IDs, Addresses, and Owner Names•.

Historical map features such as cemeteries, schools, and churches may vary depending on the county, acreage of individual parcels, or date of publication. Parcel and owner information in our maps is only shown for rural areas. Areas within cities and villages may show some larger parcel tracts, but small parcel tracts are not shown. Some editions show regional features such as park or trail maps and other notable points of interest. Most eBooks published after 2009 have facing-page aerials. All eBooks published since 2017 include 3D aerials. Please contact us if you are interested in aerial map availability for a specific eBook edition. MobilePlat™ and GeoPlat™ do not include aerials within the files, but you can access aerial imagery through the recommended apps (Avenza Maps app and Google Earth).
